VENTURE MEDICAL WEIGHT LOSS

Welcome To Venture Medical Weight Loss!

Required Patient Intake in Kentucky So We Can Better Assist in Your Health-care

No need to be intimidated by the length of these intake forms. Many are simply check-marking information and reading and signing the consents. More importantly, they are required only once every 3 years!

Don't forget to check our specials on our website page.

Informed Consent: We want you to know that medical weight loss is an important medical decision in your health care. We are informing you through lectures and printed materials that we strive to work with you carefully and safely to help you achieve a medically significant weight loss. To help achieve this loss and help you in maintaining the weight loss long term, you must understand we may prescribe various different nutritional plans, exercise programs, and when appropriate use medicines short term and long term. You will be informed on how the medicines work, possible side effects, and know possible consequences of the medicines, dietary, and exercise activities planned. Sometimes the use of medicines, length of use of medicine, or medication dosing may be used in an "off label" manner. This means the doctor may be using the medicines safely in a manner other than initially approved by the FDA. The use of meds will always be within the scope of accepted medical Bariatric (weight loss) medicine. Please note that the use of medications for weight loss is optional, and no weight loss treatment (including use of medications) guarantees successful weight loss.

Your Role 1. Provide honest and complete answers to questions about your health, weight problem, eating activity, medication or drug usage, and lifestyle patterns to help us help you. 2. Devote the time and effort necessary to complete and comply with the course of treatment. 3. Allow us to share information with your personal physician if necessary. 4. Make and keep follow-up appointments so that we can help you the best, allowing necessary blood tests as needed. 5. Advise the clinic staff and Dr. of any concerns, problems, complaints, symptoms, or questions you develop. 6. Inform your personal physician of your weight loss efforts and have or establish a primary physician before beginning this program.

Possible Side Effects 1. Reduced weight. By reducing your caloric intake, you may see a variety of temporary and reversible side effects including, but not limited to, increased urination, momentary dizziness, reduced metabolic rate, cold sensitivity, slower heart rate, dry skin, fatigue, constipation, diarrhea, bad breath, muscle cramps, changes in menstrual pattern, dry or brittle hair, or hair loss. Medication side effects may include any of the above plus dry mouth, mild headaches, and very rarely a racing or pounding heart rate or an elevation in blood pressure or other rarer side effects. This will be closely monitored as safety is our priority. 2. Reduced potassium levels or other electrolyte abnormalities. We recommend monitoring electrolyte levels and correct them if they become too low. If they were not corrected, these can result in muscle cramps, heart rhythm irregularities and other symptoms as above. Always inform us if you are on or begin a water pill. We recommend following your levels with occasional blood testing. 3. Gallstones. Overweight people are at risk for having or developing gallstones. One study reports that 1 in 10 persons entering a weight loss program may have silent or undiagnosed gallstones. Active weight loss can produce new stones or cause established stones to develop symptoms. The pain is usually in the right upper abdomen and may spread to the back. Gallbladder problems may require medications or even surgery to remove the gallbladder. Notify your primary doctor or us if you develop symptoms of gallstones including abdominal pain, fever, nausea, and vomiting. 4. Pancreatitis. Inflammation of the bile ducts or pancreas gland may be associated with gallstones and may be precipitated by eating a large meal after a period of strict dieting. It may require hospitalization, and rarely can be associated with life threatening complications. Notify us or your primary physician if you develop symptoms such as pain in the left upper abdominal quadrant, fever, or vomiting. 5. Pregnancy. Notify us if you become pregnant. Some overweight patients have irregular ovulation and weight loss may increase ovulatory regularity and the chance of becoming pregnant. If pregnant, you must change your diet to avoid further weight loss. **A restricted diet can damage a developing fetus.** Also, any weight loss medications must be discontinued if pregnancy occurs since we do not want you to continue to lose weight during that time. You should take precautions to avoid becoming pregnant during weight loss. 6. Sudden death: Patients with obesity, especially those with associated high blood pressure, diabetes, or heart disease have a higher risk of sudden death and development of a serious potentially fatal disease known as primary pulmonary hypertension. Rare instances of sudden death have occurred while obese patients are undergoing weight loss even in a medically supervised program. No cause and effect relationship with the diet program and sudden death has been established. 7. Risk of weight gain – Obesity is a chronic condition. Most patients who lose weight have a tendency to regain unless in some type of maintenance program and long-term efforts at controlling the weight are continued. We will provide you with a plan to prevent weight from returning. 8. **Incomplete or Inaccurate responses to ongoing intake questions, taking certain**

medications, using chemical substances, or drinking alcohols when taking Phentermine can cause serious health or psychiatric complications.

RULES FOR USE OF WEIGHT LOSS CONTROL MEDICATIONS

I wish to enter into the weight loss program directed by Venture Medical Weight Loss LLC. I understand this program includes diet, exercise, behavioral & lifestyle changes, and appetite suppressants when appropriate. I understand that the **abuse/overuse of appetite suppressants is potentially life threatening and illegal. Appetite suppressants are controlled substances that are regulated by State and Federal Laws.** I understand pursuant to State and Federal Laws prescriptions for controlled substances cannot be filled any sooner than medically appropriate. I understand I will not and cannot receive refills on prescriptions for appetite suppressants any earlier than what is medically appropriate. I understand that **it is illegal to obtain appetite suppressants from more than one physician at a time (the so-called Doctor Shopping)**. **I understand that if appetite suppressants from multiple healthcare providers are on my record, for any reason, I am participating in an illegal action and may be held liable for criminal activity. I understand that my use or misuse of controlled substances including appetite suppressants is reportable to appropriate authorities of the commonwealth of Kentucky which also shares information with multiple patient monitoring programs (PMP) of other states in the USA.**

Signature of Participant: _____ Date _____

Witness :_____ (Medical Staff only) Date _____

KASPER (Kentucky All Substance Patient Electronic Record) Consent:

I understand that Kentucky law requires physicians prescribing controlled medications (including weight loss medications) to monitor patients' use of these medications. This monitoring includes an initial drug screening panel & KASPER report. I understand KASPER reports list what controlled substance prescriptions I have filled in the past several years. Further monitoring may include random drug screens, random pill counts, and repeat KASPER reports every three months while in the Venture Weight Loss program. Therefore, I understand that I am to bring in my unused weight loss medications to my appointments as they may be randomly required. I will cooperate with random pill counts. I will allow random drug tests of my urine and/or blood. I understand that this required monitoring could result in the delay and/or inability of my physician to prescribe these types of medications to me. I understand that weight loss medications may assist in weight loss, but that there is no guarantee they will do so. I understand weight loss medications can only be used with proper nutritional and behavioral changes. Failure to comply with nutritional and behavioral changes may result in physician discontinuing medication. If weight loss is not improved with use of medications, I understand my physician will need to stop or change medications. I understand my physician can discontinue weight loss medications at any time & will do so if weight loss plateaus. I understand that if weight loss medications are used, the plan is to use them only during weight loss and then to taper off of them once goals have been met. I will be evaluated monthly to see if medications can and should be refilled. I understand that weight loss medications are just one option to assist in weight loss, but are not required to lose weight. There are many options for weight loss although all patients will be instructed on nutritional, behavioral, and psychological changes. Just like any medication, weight loss medications can have a risk of side effects. Such side effects may include (but are not limited to), dry mouth, constipation, anxiety, jittery sensation, headache, insomnia, allergic reaction, heart palpitation (rare), elevated blood pressure (rare). Addiction is listed as a potential side effect (although this has not been reported if used as prescribed.) I understand it is my responsibility to notify my Venture Weight Loss physician if I have any side effects. If weight loss medications are used over 1 month, they should be tapered off unless you become pregnant or have a serious side effect from the medication in which case they can be stopped immediately. Failure to taper off of weight loss medications may result in rebound hunger, fatigue, depression, gain in weight, and other symptoms. I understand that if I desire to discontinue medications for any reason (including simple inability to continue program), I will contact VMWL to obtain a proper exit plan based on my current medical conditions. Unused medications may be returned to Venture Weight Loss for proper disposal or follow the guidelines at www.fda.gov/consumer.

Females only: I certify that I am not pregnant. I agree and understand that I must notify my prescriber if l plan to become pregnant or am unsure if I am pregnant. I agree not to take weight loss medications if I become pregnant. This is due to the increased risk of teratogenicity (fetal harm/damage) with the use of our medications or intentional weight loss restricting caloric intake.
